

2 Channel Relay Module Bluetooth 4.0 BLE for Apple Android Phone IOT

You need power the relay module,there are 2 motheds:

- 1) Use the DC power supply to connect the 5V power supply interface
- 2) Use the 9V power supply adapter to connect the 6-24V power supply interface.Please pay more attention about the positive and negative. When the connection is right, the LED will be on. If the LED did not turn on in 3 seconds after connection, please exchange the positive and negative and try again.

2. Download android APP from this link:

<https://www.adrive.com/public/WxDahn/Andoid%20app.rar>

- 3.

NOTE: The android phone must support Bluetooth 4.0 and the system must be 4.3+.

After installing it ,please open the APP, then you will go to this page,please click scan, then you will find the relay module:ZL-RC02D
